

## DECLARATION FOR MECO FAN COIL UNIT

To anybody who concern:

We hereby declare that all the MECO cassette type fan coil units must be used together with 2-way or 3-way water valve for both 2 pipe or 4 pipe systems.

If the system do not installed the water valve, it might cause leaking, or fail to start ,and some other questions, all the design of our cassette fan coil is based on the system with installed the water valve cerrectly.

By the way, as per the manual mentioned, the system can not worked at the surrounding which water temperature is more than 70<sup>o</sup>c . Because it might cause the broken for drain tray, fan and plastic parts.

We will not support any duty for the problems which is becasue of the water valve did not installed correctly and the water temperature is out of range.

Pls read the manual and also read the warning and attention items which pasted onside the FCU carefully, before installing the cassette type fan coil unit.

Hereby declare.
